Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                      US-09-308-397-1

The present invention relates to nucleic acids (AAH90701-AAH90918)
encoding polypeptides (AAM01002-AAM01114), which are essential for the
viability of a bacterial cell wall. The acronym CFE stands for "CEG For
Expression", where CEG stands for "Conserved Essential Gene". The nucleic
acids are useful for detecting the presence of proteins essential for the
viability of a bacterial cell wall in samples such as cells, tissues,
biological fluids, blood, serum, nose, ear or throat swabs with ligands,
and for detecting corresponding target nucleic acid molecules with
complementary sequences. The nucleic acids are also useful for
determining whether a genomic nucleotide sequence of interest is
cesential for viability of a bacterial cell or whether it resides within
an operon, by integrating an exogeneous nucleotide sequence of interest
comprising 200-500 base pairs) into the genomic sequence of interest
which confers a selection agent such as chloramphenicol. The nucleic
comprising the selection agent such as chloramphenicol. The nucleic
cids and proteins are also useful as vaccines and for treatining bacterial
infections with gene therapy and antisense therapy. The nucleic acids
also enable identification of targets suitable for the treatment of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GCTCTCCTTGAGCCTGCTAGCCAGAAACTAGCTGAAACTCTAGCTCAGGTAAGTTTTTCA 660
                                                                                                                                                                                                   The present sequence encodes a FabD protein of Streptococcus pneumoniae 0100993 (NGTMB 40800). The novel FabD polypeptides are related to other proteins of the malonyl-COA.RCP family. The products can be used for the diagnosis of Streptococcus pneumoniae infections. Vectors containing the FabD DNA sequence can be administered directly to a mammal to produce the FabD poptide to provoke an antibody/T-cell response in order to prevent a disease. The peptide can be used to screen for compounds which modulate its activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TATCAGCCTGATATGGTTGCTGGTTTGTCTTGGAGAATACTCTGCCTTGGTGGCAAGC 300
